Professional Summary

5+ years of experience in **Architecting** and **Delivering** end-to-end Frontend solutions using React.js in the **Health/Insurance, Automobile, Logistics (Shipping/Trucking), Education** domains, specializing in intuitive **Business Internal tools** that solve critical business problems and streamline complex workflows.

Skills

Prog. Languages:	JavaScript, TypeScript, Go, Dart, Python, SQL, HTML5, CSS3
Backend:	Go (net/http, pgx, sqlc), Node.js, RESTful APIs, GraphQL, WebSocket, SSE
Frontend:	React, Next.js, Flutter, TanStack (Router, Query, Table), Redux, React Hook Form, Tailwind CSS, Radix UI, Vercel
Databases & Cloud	PostgreSQL, Firebase, MongoDB, Google Cloud Run, Cloudflare Workers, AWS (EC2, RDS, S3), Vercel, Docker, Nginx, GitHub Actions
Integrations:	Shopify Storefront API, Razorpay, Firebase Cloud Messaging, Google Maps
Tools & Methods:	Git, CI/CD, Jest, Vitest, Postman, Claude Code, System Design, Agile/Scrum, Linux (LMDE)

Work Experience

Freelance Frontend Developer *June 2025 - Present*

Self-employed · Mumbai, India (Remote)

- Built a cross-platform e-commerce mobile app in Flutter (Dart) using Shopify's Storefront API as the commerce backend.
- Consumed the Storefront GraphQL API with queries and mutations to drive the product catalogue, collections, cart and checkout flows from the client's Shopify store.
- Integrated the Razorpay payment gateway for secure in-app payments.
- In parallel, upskilled in Go (Golang), PostgreSQL and cloud deployment on AWS and GCP, and adopted GenAI — Claude Code for AI-assisted development and Google Gemini for an in-app assistant — to build CCMS Suite (see Projects).

Senior Frontend Developer *Sept 2021 - May 2025*

Twelve Springs Limited, London, United Kingdom

- Developed responsive, cross-browser **web applications** using **React.js**, designed for **Cloud** environments to ensure seamless user experiences across desktop and mobile devices.
- Integrated React front-end with **Java-based REST APIs, WebSockets** and **Firebase Cloud Messaging** to deliver real-time communication, push notifications, and synchronized data across clients.
- Built reusable React components and implemented **CI/CD pipelines** with **automation scripts**, improving code maintainability and reducing the development time by 30%.

- **Collaborated closely with backend and QA teams** to debug, test, and deliver scalable features aligned with business requirements.
- Implemented state management with React Context to handle complex data flows and applied performance optimizations (**memoization, code splitting**) to enhance application speed and rendering efficiency.
- **Mentored** junior developers in React and modern JavaScript practices.

Organizational Growth Platform - www.myopen360.com
Key Highlight: Built a SaaS product with role-based user access on the frontend, real-time video calls between users, and a management hierarchy system featuring team-building and support tools.

Auto Parts Communication Platform - www.liveyards.com
Key Highlight: Developed a chat interface with instant messaging and image sharing, designed to automatically close upon request deal completion. Implemented WebSocket-based peer-to-peer connectivity for auto parts requests, a bilingual UI (English & Spanish), and push notifications using Firebase FCM.

Educators Data Management Platform - www.empoweringk12.com
Key Highlight: Led a team of 2 junior developers and architected a demo-ready School Administration Portal, converting 20 Figma pages into a React.js codebase within 11 days. Oversaw planning and task distribution to maximize efficiency while managing parallel projects.
Project Description: Allows educators to collect data for document accommodations, track special education and Section 504 students, provide case managers and administrators with actionable insights, support compliance reporting, and enable data-driven decisions to streamline user workflows.

Frontend Developer *June 2020 - Sept 2021*
Technoark Solutions Private Limited, Mumbai, India

- Developed web applications using **React.js**, designed with libraries ie. **Material UI**, Bootstrap and third party Themes.
- Integrated CRUD operations with Java-based REST APIs and implemented **Google Maps** with custom filters for **live tracking, enabling real-time** data visualization and communication.
- Built multi-step and **dynamic forms** connected to a MongoDB database, including a 3-page form and drag-and-drop components, improving call center data collection and management efficiency.
- Collaborated with designers and backend teams to align UI/UX with business requirements, ensuring scalable, maintainable, and user-friendly solutions.

Insurance Verification System - https://verifixed.io
Key Highlight: Developed an insurance verification portal with a dynamic 3-page dental insurance form generated from the admin panel. Implemented filter-based reports, PDF export, user activity logging, form cloning, and full CRUD functionality to streamline workflows and form management.

Trucking Management Platform - www.wmtrucking.net
Key Highlight: Developed real-time truck tracking on Google Maps with filtered data and live updates. Built an admin portal with data management controls, dashboard analytics, and full CRUD functionality to streamline operations.

Projects

CCMS Suite — app.ccms-suite.com (v0.3.0)
Write-ups: Go backend rebuild · CI, migrations & no ORM

- **Multi-tenancy:** many customers in one shared PostgreSQL database, each kept isolated.
- **Roles & permissions:** nested permission tree with per-user overrides; JWT sign-in carries the tenant with the user.
- **Staff management & live chat:** employees, departments, positions and reporting lines; real-time chat over WebSockets.
- **No ORM:** plain SQL with sqlc-generated Go on pgx — the reviewed SQL is what runs, no hidden N+1 queries, and invalid columns fail at code generation.
- **End-to-end type safety:** types carry the contract from Postgres CHECK constraints through generated Go (nullable fields as pointers, money as int64 cents) to JSON and TypeScript, so a mismatch breaks the build, not the product.

Tech Stack: Go, PostgreSQL 18, pgx, sqlc, Atlas, React 19, TypeScript, Vite, Tailwind v4, TanStack, Docker, GitHub Actions, Google Cloud Run, Cloudflare Workers

Go backend foundation (public demo) — github.com/Shrin210-98/CanteenCrowd-go-api
The original multi-tenant backend, hand-written without AI as a Go learning project (58 commits, MIT licence): JWT auth carrying tenant context, nested RBAC with per-user overrides, and employee management on net/http, sqlc and Atlas.

Education

BSc IT – 9.17 CGPA / A+ Grade *2016 - 2019*
Jai Hind College, Mumbai University

Maharashtra State Board
S.N Junior College, 12th Board - 82.62% *2014 -2016*
Mother Teresa High School, 10th Board - 86.40% 2014
